

NEW FUNGICIDE FOR PHYTOPHTHORA CONTROL IN GINSENG

Revus is a new fungicide that has recently made its way through the IR-4 pipeline and is registered for use in Wisconsin. Revus is a tool to be used for Phytophthora control and can be used during the year of harvest. The rainy weather this summer has been extremely favorable for Phytophthora blight and root rot and preventive applications are recommended. Revus can be used in alternation with other fungicides for Phytophthora that include Presidio, Reason, Captan, and Forum.

Please note: The supplemental Revus label that specifically lists ginseng must be onsite to be in compliance.

Ginseng

Begin applications (8.0 fl. oz./A) prior to disease development and continue throughout the season on a 7-10 day interval. Make no more than 2 consecutive applications before switching to another effective fungicide. Use the shorter interval and/or higher rates under high pressure or when conditions are conducive to disease. Revus may be tank mixed with another labeled fungicide that has a different mode of action.

The addition of a spreading/penetrating type adjuvant such as a non-ionic based surfactant or crop oil concentrate or blend is recommended.

Application: For best results, use sufficient water volume to provide thorough coverage. Revus may be applied by ground, chemigation, or aerial application.

Specific Use Restrictions:

- Do not apply more than 32 fl oz of product/A/season (0.52 lb ai/A/year).
- Do not apply within 2 days of harvest (2-day PHI).
