

## FIFRA 24(c) Special Local Need Label (SLN)

FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF WISCONSIN

**For Control of Alternaria and Gray Mold in Ginseng  
(Non-Harvest Years Only)**

### **BRAVO WEATHER STIK®**

**For Agricultural or Commercial Use Only**

**EPA Reg. No. 66222-276**

**SLN No. WI-230007**

---

**Active Ingredient:**

Chlorothalonil (tetrachloroisophalonitrile)..... 54.0%

**Other Ingredients**..... 46.0%

---

**Total:** 100.0%

### **KEEP OUT OF REACH OF CHILDREN CAUTION**

This label is valid until December 31, 2027 or until otherwise amended, withdrawn, cancelled, or suspended

**Directions for Use**

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This state-specific Section 24(c) labeling and federal label for this product must be in the possession of the user at the time of application.
- Follow all applicable directions, restrictions, and precautions on this Supplemental label and the EPA registered label for EPA Reg. No. 66222-276.

It is a violation of Federal law to harm an endangered species. Use of this product may be in counties which have endangered and threatened species present; therefore, applicators should evaluate the areas to be treated and take necessary precautions to avoid harming endangered species or their habitat/environment. Growers who are uncertain of the presence of a protected species should contact the Wisconsin Department of Agriculture, Trade and Consumer Protection at 608-224-4547.

---

## Ginseng

---

Apply 2 pt/A of Bravo Weather Stik (1.5 lb ai/A) in sufficient water to obtain adequate coverage. Begin applications when disease first threatens, and repeat at 7-10 day intervals as disease pressure warrants.

### Restrictions

#### Non-harvest years (greater than 365 days to harvest)

- Do not apply more than 28 pints Bravo Weather Stik (21 lb ai) per acre per year.

**Environmental Hazards:** This product is toxic to aquatic invertebrates and wildlife. Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment wash water or rinsate.

This chemical is known to leach through soil into groundwater under certain conditions as a result of label use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

This chemical can contaminate surface water through spray drift. Under some conditions, it may also have a high potential for runoff into surface water for several days to weeks after application. These include poorly draining or wet soils with readily visible slopes toward adjacent surface waters, frequently flooded areas, areas over-laying extremely shallow ground water, areas with infield canals or ditches that drain to surface water, areas not separated from adjacent surface waters with vegetated filter strips, and areas over-laying tile drainage systems that drain to surface water.
